Report on Cross-hole Sonic Logging
In General Accordance with ASTM D 6760

General Information	
Date:	September 12, 2008
AFT Project No.:	108026
Project Description:	Drilled Shaft Load Test Program I-80 Bridge Project Council Bluffs, Pottawattamie County, Iowa NHS-080-1(318)0-11-78
Client Name:	Longfellow Drilling
Client Address:	1209 County Highway J23, Clearfield, Iowa 50840
Client Contact:	Mike Kemery
Test Date:	August 27, 2008
Test Equipment Manufacturer/Model:	Olson Instruments, Model Freedom Data PC
AFT Field Personnel:	Michael K. Muchard, P.E.
AFT Responsible Engineer:	Michael K. Muchard, P.E.

CSL Interpretation
All tested tube pairs exhibited velocity reductions of less than 10 percent for the tested length of the shaft except the upper 2 to 4 feet in tube pairs 1-2 and 2-3. These zones had velocity reductions of 14 to 15 percent. Signals in these areas had good energy, amplitude and slightly delayed but well defined arrival times. Moreover, the wave velocities in these areas were above 10,000 feet per second which is indicative of good concrete. Furthermore, these areas are located within the permanent casing. Based on our evaluation of this data we recommend the shaft concrete between the tubes be considered acceptable for the purposes of post grouting and load testing.

Limitations

This report presents test measurements made by AFT. Interpretations were made based upon the measurements made by AFT with the latest techniques available and currently accepted standards of care recognized by Geotechnical Engineering professionals. AFT is an independent agency and is not the Geotechnical Engineer of Record. The Geotechnical Engineer of Record should ultimately make final recommendations for foundation design and construction.
